Screen Flow Diagram

Screen Sketches

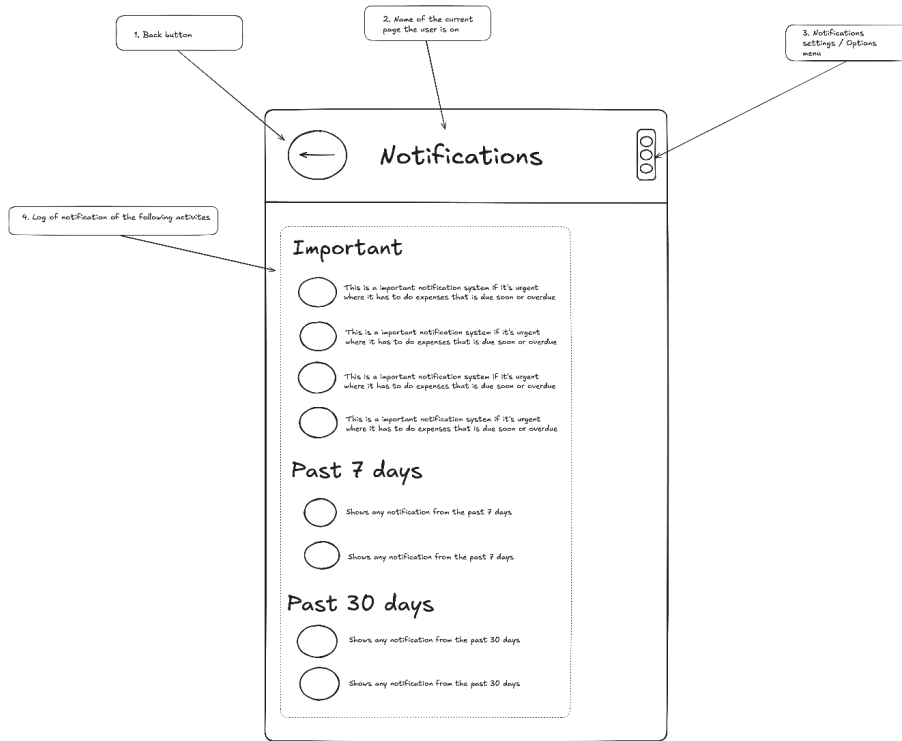

Figure 1:
This screen allows the user to view the log of notifications to alert the users of recent activities. The notification will be listed and sorted by the urgency from the top as really urgent to the bottom the least urgent. Will show notifications from the earliest (1-7 days) to the latest (30 days)

A back button (1) is used to take you back to the homepage or wherever the page you were at before navigating to the notifications page (user or group page). (2) Shows the current page you are on for smooth user experience in terms of ease of navigation. The user can also adjust the settings for the notifications (3), to either set on mute or on volume. The user is able to look at the recent activities or the very latest on the log of notifications (4) to keep the user updated.

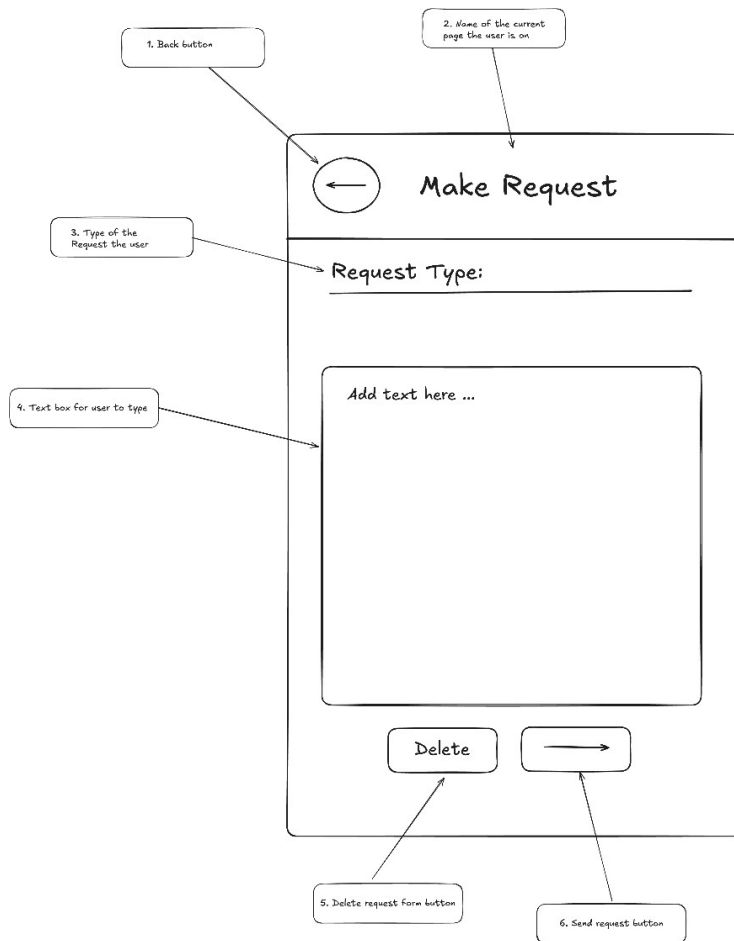

Figure 2:

This screen allows the user to send a request to another user, enabling specify a type of request along with a free response text to send any custom message as they please to do so.

A back button (1) is used to take you back to the homepage or wherever the page you were at before navigating to the notifications page (user or group page). (2) Shows the current page you are on for smooth user experience in terms of ease of navigation which is make request, this ensures that it is ensuring that user is in process of making a request form. The user is prompted to make the what type of request (3) the known types are payment, dispute, balance negotiation, etc. The user can type in a free response text body (4), to add more depth in their request so the receiver can understand the context of the request. The user can then either to delete (5) or send the request (6) to the speci user.

Non-Function Reqs:

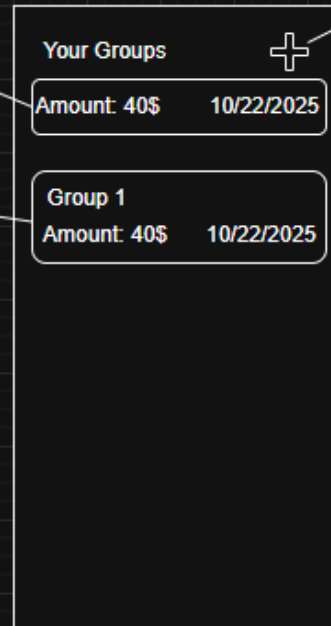

Organizational, needs to be organized by the most recent so users can look at groups and transaction without having to scroll to find the most recent one, so they can access the most timely matters

Usability, needs to be easy to use so users can intuitively manage their groups and find the transactions they are looking for

Performance, needs to be efficient so the users can find a transaction they are looking for and not have to wait on the app to pay a bill

Most Recent Transaction

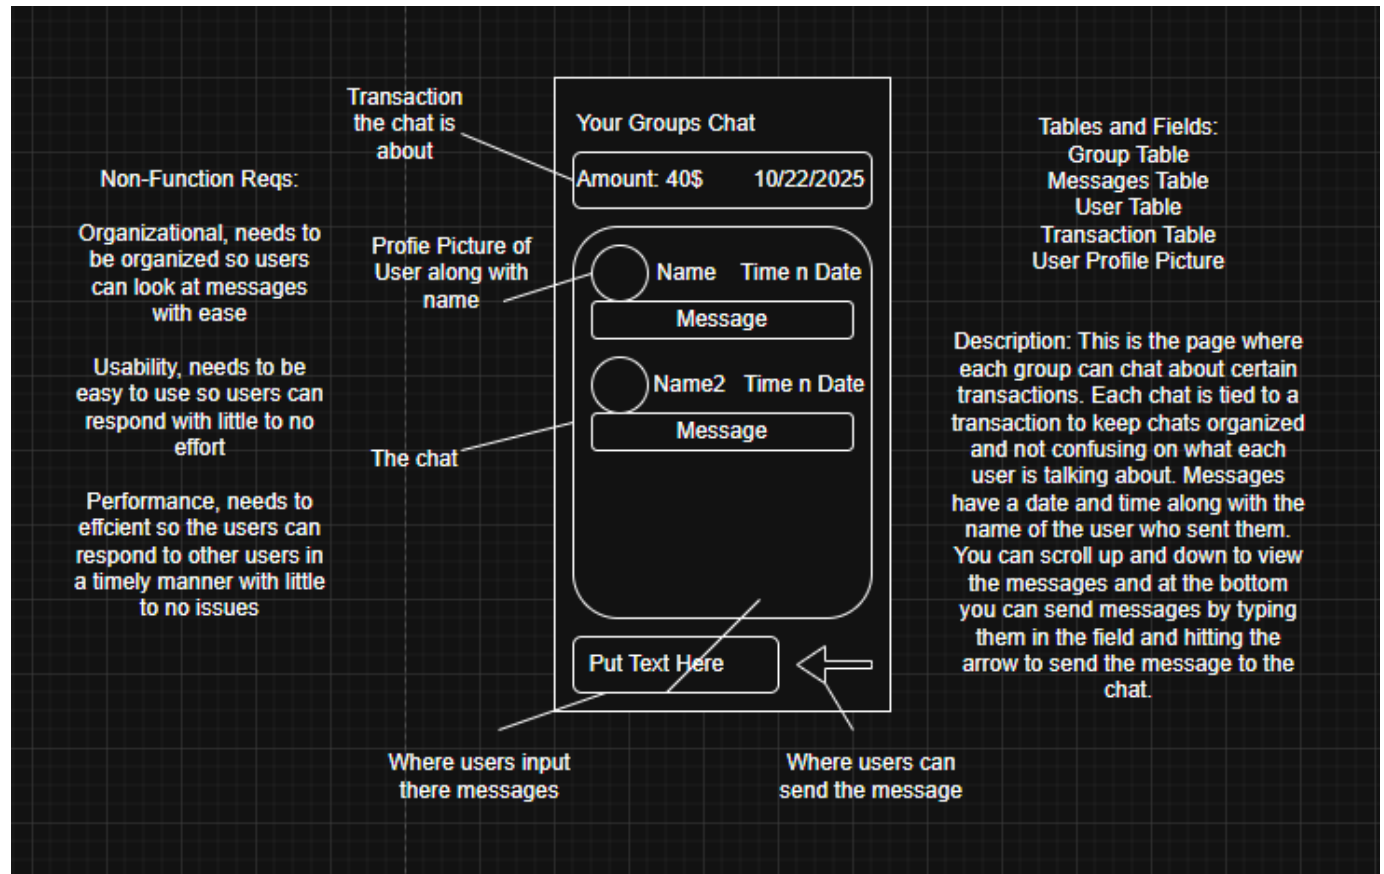

Group Card with name of group and the most recent transaction

Goes To Group Invite Page

Tables and Fields:
Group Table
Users Groups Table
User Table
Transaction Table
Group Invite Table

Description: This is the page where you can look at all the groups you are in. At the top of all the groups it will have the most recent transaction so users can easily go to the most recent transaction and not have to scroll through groups. It also has a button to add groups to the page and add groups via an invite. Has the amount for each transaction and the date they were created.
