
Design Document for **CySplit**

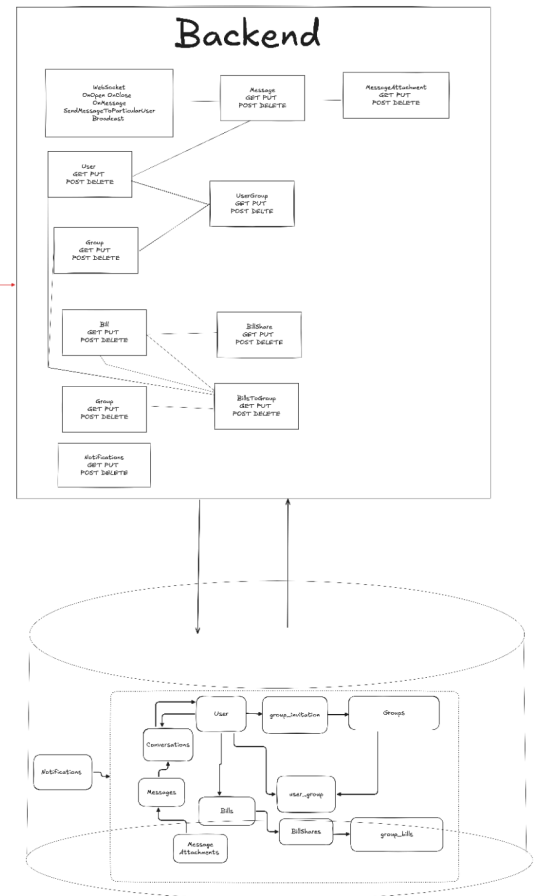

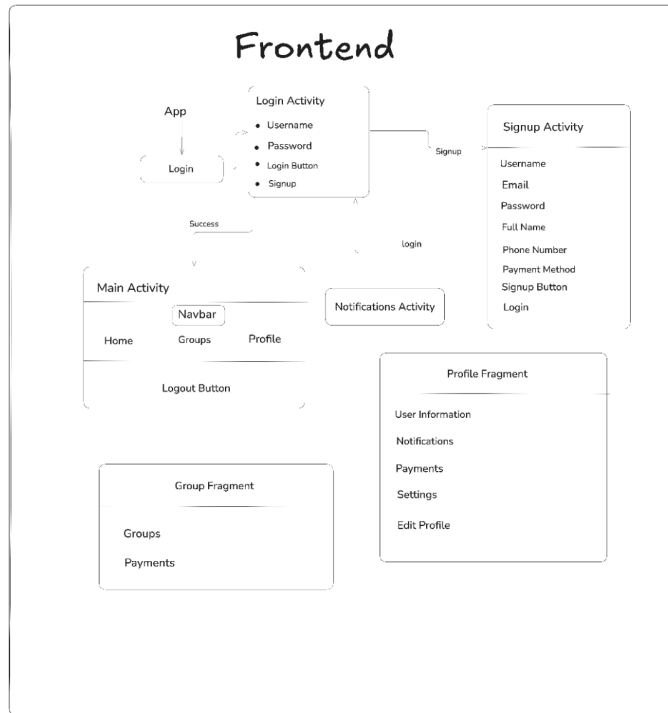

Group **3_hosen_3**

Trung Ly: 25 %

Mykhail Sokolov: 25%

Kovidh Nagula: 25 %

Aaron Knoll: 25%

Frontend:**Signup (User)**

Signup page has the following elements:

EditText: Username; EditText: Email; EditText: Password; EditText: Full name; EditText: Phone number

EditText: Payment method; Button: Signup; RedirectText: Login

Upon clicking the button 'Signup' all the values entered are sent as a POST request to the server.

Login (User)

Login page has the following elements:

EditText: Username

EditText: Password

Button: Login

RedirectText: Signup

Login Screen takes user input of their username and password, and if that username and the password is valid, it will take the user to the Home page, where they are logged in as that user.

Groups(Admin/User)

(GET) Users can view their groups. Onclick on the group would redirect them to expenses in that group.

Profile (User)

Profile page has the following elements:

Button: Payments

Button: Settings

Button: Notifications

Table: Profile info

Button: Edit Profile

In the profile, users can view info and edit profile pictures and information(UPDATE).

Backend:

The backend maps the data from the database to the application user interface based on the url endpoints

- Post -> Creates an information on the item and sends it to the database
- Get -> Reads the information on the item from the database
- Delete -> Delete an item from the database specifying the unique identifier
- Put -> Updates the information of the item and sends it to the database

Controllers:

This contains the mappings for the communication between the database and the frontend, which is the interface between the two main layers (frontend and backend)

- User, Groups, UserGroups – manage user accounts, group creation, and membership.

- Bills, BillShares, GroupBills – handle creating bills, splitting amounts, and linking bills to groups.

- Conversations, Messages, MessageAttachments – support group messaging and file attachments. Messages can also be a private message to a specific user. Messages stores chats between users within the group.

- Notifications – stores alerts for messages, invites, and bill updates.

- GroupInvitation – manages sending and accepting group invites.
